

Add more volume steps android

Continue

Many people have this problem with Android. You can see it has been reported in Android's bug tracking system. The number of levels is controlled by a setting that's compiled into the Android system image. Use a different ROM It's possible that flashing a custom-rom could increase the number of levels, but I don't know which, if any, custom ROMs do this. This bug report in cyanogenmod's tracker suggests they don't plan to add that feature, for fear it may cause compatibility problems with some apps. Use a different app (easy) Some media apps have their own volume control, on top of that provided by Android. I believe Poweramp is one such (but I don't use it myself). If there's one particular app you need more control of, such as a music app, you might want to replace it with one that has this feature. Edit your phone's OS (advanced) If you're not worried about the risk of breaking some (badly-written) apps, and your device is rooted, then you can follow these instructions to edit the Android system image to increase the number of levels. That site gives step-by-step instructions, including installing the developer tools you'll need to make system changes; a summary for knowledgeable people is as follows: Get framework.jar from your device and run baksmali on it. Edit framework\android\media\AudioService.smali Search for 0xft 0x0t 0x0t 0x0t to find the table of audio levels. Replace the first number of each row with the desired number of levels (in hexadecimal). Run smali to generate a new framework.jar, and then replace the original on the device. 1 Make sure the speaker is not muffled. Clean your speakers from any dust or debris that can muffle the sound. You can also plug in headphones or speakers.[1] 2 Unlock the device and press the Volume Up button. To increase the volume on your Android phone, you can use hardware keys, which are the buttons on the side of the device. The Volume Up button is generally the top button on the left side. This temporarily opens a popup expandable sound menu. Advertisement 3 Open your device's "Settings" app . You can find additional volume settings in the Settings menu. To open the Settings menu, swipe down from the top of the screen to display the pull-down menu. Then tap the icon that resembles a gear in the upper-right corner. Alternatively, you can open the Settings menu in the Apps menu. It has an icon that resembles a gear. 4 Tap Sound & Notifications or Sound & Vibrations. Locate the Sound menu in the Settings app. Depending on your Android model, it may say "Sound & Notifications," "Sound & Vibrations," or something similar. 5 Tap Volume. This displays a series of slider bars you can use to adjust the volume on your Android device. Drag the slider bars to the right to increase the volume. The volume bars are generally as follows: Ringtone: This bar adjusts the volume of your device when it rings. Media: This bar adjusts the volume of media sounds, such as music, videos, and apps. Notifications: This bar adjusts the volume of notifications tones you get from various apps. System: This bar adjusts the overall sound on your device. 6 Connect a speaker or amplifier. If the maximum volume on your phone or tablet is too quiet, try connecting an external speaker or amplifier. You can use Bluetooth to connect to a Bluetooth-enabled speaker or headphones. You can also use the 3mm headphone jack to connect to a stereo system or amplifier. Some sound systems allow you to connect your Android device using a USB connection. Advertisement 1 Open the Google Play Store - It has an icon that resembles a colored 'play' triangle. Tap the icon on your home screen to open the Google Play Store. Warning: Using an app to boost the volume on your phone or tablet can cause damage to your hearing and/or your speaker. Proceed at your own risk. 2 Type Volume Booster in the search bar at the top. This displays a list of Volume Booster apps you can download. 3 Download a volume booster app. There are lots of volume booster apps available on Android. The one that appears at the top of the list is Volume Booster GOODEV, which is free. Use the following steps to download and install a volume booster app: Tap "Volume Booster GOODEV" or whichever volume booster app you want to install. Tap Install. 4 Open your Volume Booster app. Tap the icon for your Volume Booster app to open it. 5 Drag the slider bar to the right. If you are using Volume Booster GOODEV, the slider bar appears at the bottom of the screen. It may be different if you are using a different app. It is recommended you only boost the volume by a little to avoid blasting your speaker or your ears. To stop boosting your volume, open the Volume Booster app and drag the slider bar all the way to the left or tap the Stop Service button. Advertisement Add New Question Question How do I increase the speaker volume on my Android? You could get an app for it or just buy a portable speaker to make it louder. Question How do I lock my phone? To lock your phone, press the power button on your device. The phone screen will be switched off. The next time you turn your screen on (by pressing power button again), you will see the lock screen. Question When I talk to people on my phone they say my voice is distorted sounds as though I'm in a tunnel. The speaker volume is also too low. How can I fix this? if you have an outgoing voice issue during call, then it means you have microphone problem. If you want to fix this, try the following suggestions: 1. Reboot or restart your phone. 2 Check the microphone hole, to see if there is anything stuck in it. If so, clean the microphone hole. If these do not work, then have the phone checked by a reputable phone repairer. See more answers Ask a Question Advertisement Thanks! The Galaxy Note 20's speakers are so loud and capable that they almost never need to be set to 100%. But by the same sense, it can be hard to find that just-right volume level since one increment represents a bigger change in sound output. Believe it or not, there's actually a first-party tool to fix this problem.With this Samsung-created app, you can adjust how many times you need to press the volume rocker to go from 0% to 100% volume. The default is 15 steps, meaning each button press represents about 7% of the total volume scale. But with this tool, you can make that number anywhere from 17 all the way up to 150 steps so that each press is less than 1% of the total volume.Don't Miss: How to Disable Bloatware on Your Note 20 for Free Without Root The app that makes this all possible is SoundAssistant. Unlike other modding apps created by Samsung, this one is available on both the Galaxy Store and the Play Store. Use either link below to download and install the app onto your phone. Open SoundAssistant and scroll to the slider under "Change step volume." Before you make any adjustments to the slider, let me explain how it works. Also, be aware that this will adjust the media volume steps only, not the ringer volume.There are 150 possible volume increments for the media controls, but the slider only goes from 1 to 10. So think of it like a scale where 10 is the fewest button presses between 0% and 100% volume (15), and 1 is the most (150). All you need to do is adjust the slider — there is no save or confirm button. To help you visualize the difference, here is a little cheat sheet showing the number of steps for each position on the slider.150 steps 75 steps 50 steps 38 steps 30 steps 25 steps 21 steps 19 steps 17 steps 15 stepsDon't Miss: The Galaxy Note 20 Has a Gorilla Glass Victus Display — Here's Why That's So Awesome Keep Your Connection Secure Without a Monthly Bill.
